

Robot ON!

A Serious Game for Improving Programming Comprehension

Motivation

- Many students struggle in **introductory computer programming** courses
- Students especially struggle to **understand** code they did not write themselves
- Most serious games about programming involve players **writing** their own code
 - Students lack programming comprehension skills

Robot ON!

- Players take the role of a programmer trying to activate a series of ‘Mech’ systems
- Controlling a robotic avatar, the player must complete **puzzle tasks** to finish each level
 - Each puzzle is based on understanding existing code

Robot ON!

- Two dimensional
 - The player can run, climb, or fall through lines of code
 - Mimics a **real code environment** by allowing navigation similar to a word processor cursor
- Tools provided to the player allow them to interact with different **puzzle tasks**
 - Each line of code may have any number of puzzle tasks

```
/**/ This program calculates pi.  
  
/**/ This program is a prototype!  
  
string my_word = "hello there!";  
  
int my_number = 2  
  
if (my_number <= 1){  
    my_number = 0;  
}  
  
else{  
    my_number = 10;  
}  
  
bool varname;  
  
/*mybool = true:*/  
  
/*mybool is true:*/
```

Tasks:
ACTIVATE the beacons in the right order.
CHECK the values of the variables.
NAME the variables with appropriate names.
COMMENT the lines that describe the code.
UN-COMMENT the code that is correct.

Available Tools:

Activator: 1

Time remaining: 946 seconds

Robot ON! Puzzle Tasks

- Puzzle tasks focus on understanding key programming concepts:
 - **Variable values**
 - Data type identification
 - Program statements
 - Control flow

```
/**/ This program calculates pi.

/**/ This program is a prototype!

string my_word = "hello there!";

int my_number = 2

if (my_number <= 1){
    my_number = 0;
}

else{
    my_number = 10;
}

bool varname;

/*mybool = true:*/

/*mybool is true:*/
```

Tasks:

- ACTIVATE the beacons in the right order.
- CHECK the values of the variables.
- NAME the variables with appropriate names.
- COMMENT the lines that describe the code.
- UN-COMMENT the code that is correct.

Available Tools:

Activator: 1

Time remaining: 946 seconds

Robot ON! Puzzle Tasks

- Puzzle tasks focus on understanding key programming concepts:
 - Variable values
 - **Data type identification**
 - Program statements
 - Control flow

```
/**/ This program calculates pi.

/**/ This program is a prototype!

string my_word = "hello there!";

int my_number = 2

if (my_number <= 1){
    my_number = 0;
}

else{
    my_number = 10;
}

bool varname;

/*mybool = true:*/

/*mybool is true:*/
```

Tasks:

- ACTIVATE the beacons in the right order.
- CHECK the values of the variables.
- NAME the variables with appropriate names.
- COMMENT the lines that describe the code.
- UN-COMMENT the code that is correct.

Available Tools:

Activator: 1

Time remaining: 946 seconds

Robot ON! Puzzle Tasks

- Puzzle tasks focus on understanding key programming concepts:
 - Variable values
 - Data type identification
 - **Program statements**
 - Control flow

```
/** This program calculates pi.
```

```
/** This program is a prototype!
```

```
string my_word = "hello there!";
```

```
int my_number = 2
```

```
if (my_number <= 1){
```

```
    my_number = 0;
```

```
}
```

```
else{
```

```
    my_number = 10;
```

```
}
```

```
bool varname;
```

```
/*mybool = true:*/
```

```
/*mybool is true:*/
```

Tasks:

ACTIVATE the beacons in the right order.

CHECK the values of the variables.

NAME the variables with appropriate names.

COMMENT the lines that describe the code.

UN-COMMENT the code that is correct.

Available Tools:

Robot ON! Puzzle Tasks

- Puzzle tasks focus on understanding key programming concepts:
 - Variable values
 - Data type identification
 - Program statements
 - **Control flow**

```
/**/ This program calculates pi.

/**/ This program is a prototype!

string my_word = "hello there!";

int my_number = 2

if (my_number <= 1){

    my_number = 0;

}

else{

    my_number = 10;

}

bool varname;

/*mybool = true:*/

/*mybool is true:*/
```

Tasks:

- ACTIVATE the beacons in the right order.
- CHECK the values of the variables.
- NAME the variables with appropriate names.
- COMMENT the lines that describe the code.
- UN-COMMENT the code that is correct.

Available Tools:

Activator: 1

Time remaining: 946 seconds

Customizing Robot ON!

- Robot ON! was designed to be customizable and extendible by course instructors
 - Levels can be created for **different programming languages**
 - Puzzle tasks can be created to target specific students and learning materials
 - Creating puzzle tasks provides students a chance to learn through **failure!**

Customizing Robot ON! - XML

```
13 <code>
14 <badcomment size="1" righttext = "This program counts from
15 1 to 10!">    This program counts from 10 to 1.
16 </badcomment>
17 <oncomment size="1">    "This program counts from 1 to 10!"
18 </oncomment>void main() {
19     for(int i = 1;i &lt;=10; i++){
20         cout &lt;&lt; i &lt;&lt; endl;
21         if (i % 5 == 0){
22             cout &lt;&lt; "div by 5!" &lt;&lt; endl;
23             <beacon actnums="0,1"></beacon>
24         }
25     }
26 </code>
```

Evaluating Robot ON!

- Is the Robot ON! game **playable** by undergraduate students?
- Does Robot ON! give players sufficient **skills** to work with a new programming language (i.e., achieve learning outcomes)?
- Do students **enjoy** playing the Robot ON! game?

Future Work

- **Planned Evaluation**
 - Two part study of usability and learning outcomes
- **Incorporation into introductory courses**
 - Robot ON! is intended to supplement existing courses
- **Open-source**
 - Robot ON! is available to other institutions for community improvement on Github
- **Wider application of CS game-based learning**
 - Robot ON! game could be adapted to include other software concepts (e.g. parallelization)

Summary

- Robot ON! is a **learning supplement** for introductory programming courses to aid students in developing programming comprehension skills
- Robot ON! can be a starting point for the creation of an **improved** game for teaching debugging or other concepts
- Robot ON! can be **customized and extended** by instructors in accordance with their learning materials
